

Mirror Trader – Quick Start Guide

1. Introduction

Mirror Trader is a comprehensive trading platform, providing you with unique tools for knowledge-based trading: Live signals, sentiments, market charts, oscillators and chart studies.

Mirror Trader features a database of trading strategies created by worldwide strategy developers. Using the Mirror Trader you can use streams of information for manual trading, follow selected signals for your trades or automatically mirror trades of your selected strategies.

The Mirror Trader allows you to:

- Use Manual Trading Semi Automatic Mirroring and Automatic Mirroring in one platform
- Benefit from experienced traders' knowledge
- Control and manage real-time signals generated by worldwide strategy developers
- Back up your trading decision with market trends from strategies and users
- Take advantage of exclusive features such as: Live signals and strategies detailed analysis, as well as popular trading tools: charts, indicators, oscillators, rates and market sentiments

2. Live Chart

The live chart section provides the user with live market charts of all the symbols available in the Mirror Trader. Users can switch between open charts (1) or add charts of additional symbols (2).

The Mirror Trader provides traders with various analytic tools for analyzing the charts (3):

- Time Frames: choose the time frames of the candlesticks in the chart
- Oscillators and chart studies
- Different chart types: Candlestick, line and OHCL
- Sentiments
- Drag chart / Cross
- Zoom in / out
- Glue to right – move the chart to the right (current time)

You can also see the “buy” and “sell” rates of the symbol (4).

You can open a manual position, by clicking on the rates on the chart area, or on the one of the rates in the Mirror Trader’s header.

When a new position is open an arrow icon will appear on the live chart. Point the mouse on the arrow icon to see additional details about this positions

3. Open positions

	Ticket	Strategy	Symbol	B/S	Amount (k)	Open Price	Pips	P/L	Stop	Limit	
▼	S 325713212	Auto-Action FX	EUR/USD	Sell	10	1.42615	-4.0	-4.00	0	0	🔧 ✕
▼	M 325713127	Manual	EUR/CHF	Sell	10	1.25936	-4.2	-4.76	0	0	🔧 ✕
▼	A 325670521	KingSwing	EUR/JPY	Buy	10	116.558	21.2	25.90	113.355000	0	🔧 ✕
▼	S 325545004	Powerforex	USD/CAD	Buy	20	0.97256	-60.8	-125.77	0	0	🔧 ✕
	1										2 3

In the open positions section you can see a list of all the open positions in your account. The icon left to the ticket number (1) indicates whether the position was opened automatically by a strategy (A), Mirrored from a signal (S) or opened manually by the user (M). You may add or change the stop loss and limit values, by clicking on the “edit” icon (2) or close the position, by clicking on the “close” icon (3).

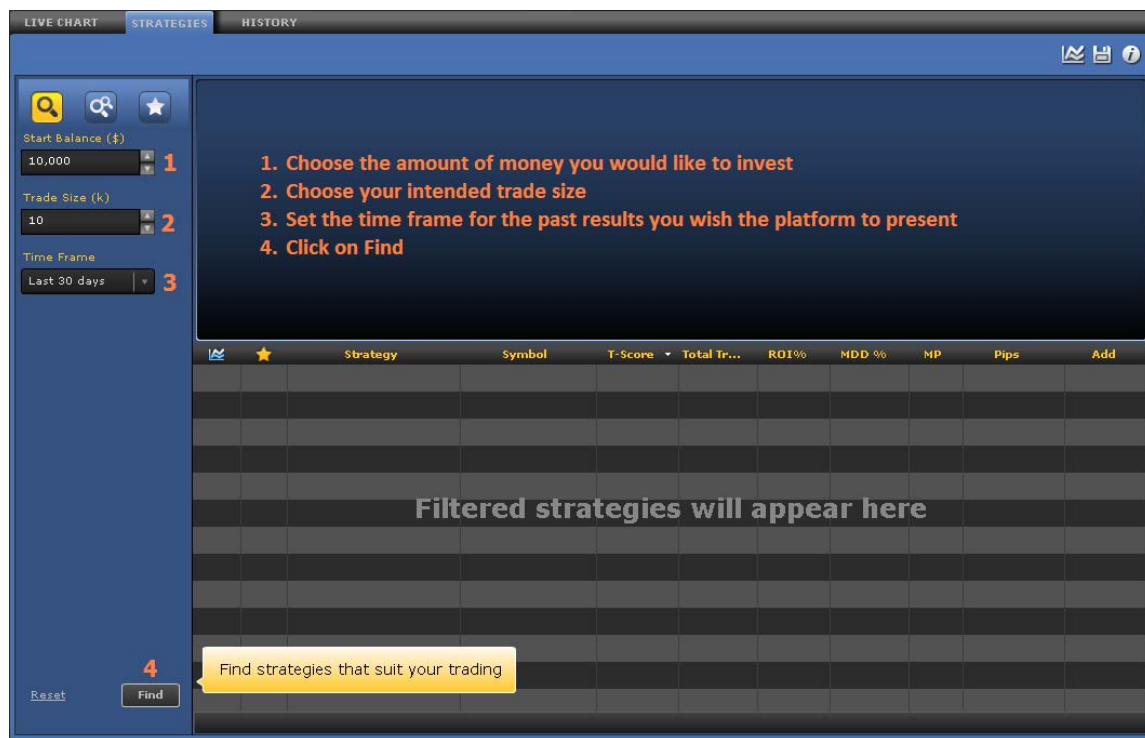

4. Strategies:

The “Strategies” section provides access to a database of worldwide trading strategies.

The strategy developers send “buy” and “sell” signals, based on their understanding of the market. Each of these signals is being recorded, so you can find a full record of the strategy’s performance since the day it was added to the platform.

Strategies’ filters:

The first step in setting up an account is selecting strategies to build your portfolio. Use the Smart Filter to identify suitable strategies according to your specific trading criteria. Simply define three basic trading parameters (initial balance, trade size and time frame) that reflect your preferences and let the Smart Filter find the appropriate strategies.

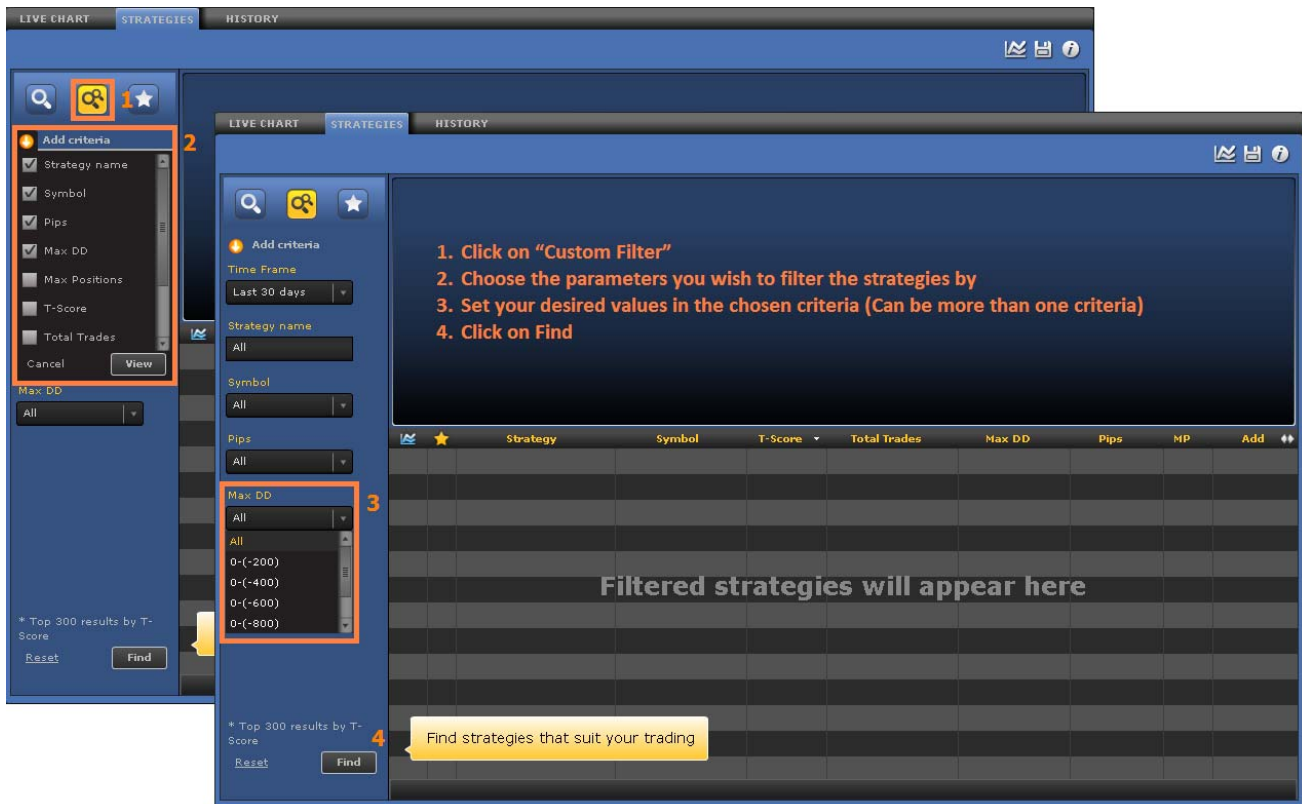

1. Choose the amount of money you would like to invest
2. Choose your intended trade size
3. Set the time frame for the past results you wish the platform to present
4. Click on Find

* *These parameters will be used only for filtering the strategies and will not affect your account.*

Another way to locate strategies for your account is to use the custom filter.

The custom filter enables you to view and analyze all strategies trading results and statistics. You can filter and sort the strategies by one or more criteria.

1. Click on "Custom Filter"
2. Choose the parameters you wish to filter the strategies by
3. Set your desired values in the chosen criteria (Can be more than one criteria)
4. Click on Find

After you used the smart filter or the custom filter to locate potential strategies for your account, the platform calculates performance data of all the strategies during your selected timeframe, and will show **only** the strategies that fit your preferences.

Use the data provided by the platform to analyze the results and identify the strategies you want to trade for you.

5. Strategy Card:

For further analysis of the strategies performance you may open the strategy card, by clicking on the strategy's name.

The Strategy Card contains the following information about the strategy:

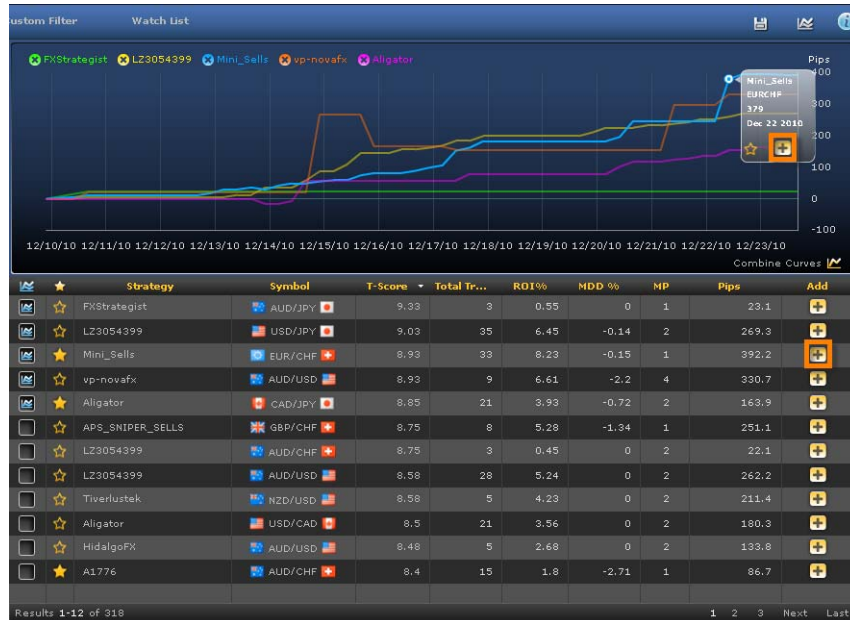

- Summary of the strategy's performance
- Strategy curve
- History of the strategy's T-Score
- Current open positions
- Trade history
- Strategy description provided by the strategy developer.

In the strategy card you can find details about the strategy since the day it was added to the Mirror Trader. The information can be filtered by time frame.

You may add a strategy to your portfolio by clicking of the "+" icon or to the watch-list by clicking on the "Star" icon.

6. Adding Strategies:

When you found a strategy you want to mirror, add it to your portfolio, by clicking on the plus sign next to your chosen strategy or directly from the graph.

Set trade size*:

All you have to do now is to set your trade size for the strategy. This will determine the trade size of each position opened by your selected strategy.

You can also set an approximate loss limit for each strategy you add to the portfolio.

You can also set “Stop” and “Limit” values for each position the strategy opens in your account.

The screenshot shows the 'ADD STRATEGY' dialog box for the 'Vipsig-China NZD/USD' strategy. The account balance is 60000000046998. The 'Amount' is set to 20 (k). Under the 'Advanced' section, there are checkboxes for 'Pause Strategy' (set to 500), 'Stop' (set to 1 Pips), and 'Limit' (set to 0 Pips). There are 'Cancel' and 'Add' buttons at the bottom.

* The trade size has a direct effect on the leverage of your account.

7. Trading Portfolio

Your Trading Portfolio consists of all the strategies you have chosen to trade in your account. The strategy providers open and close positions according to their rules and understanding of the market. When a strategy is added to your portfolio, every trade it sends opens in your account.

You can control the activation of a strategy by checking/un-checking the box next to the strategy name.

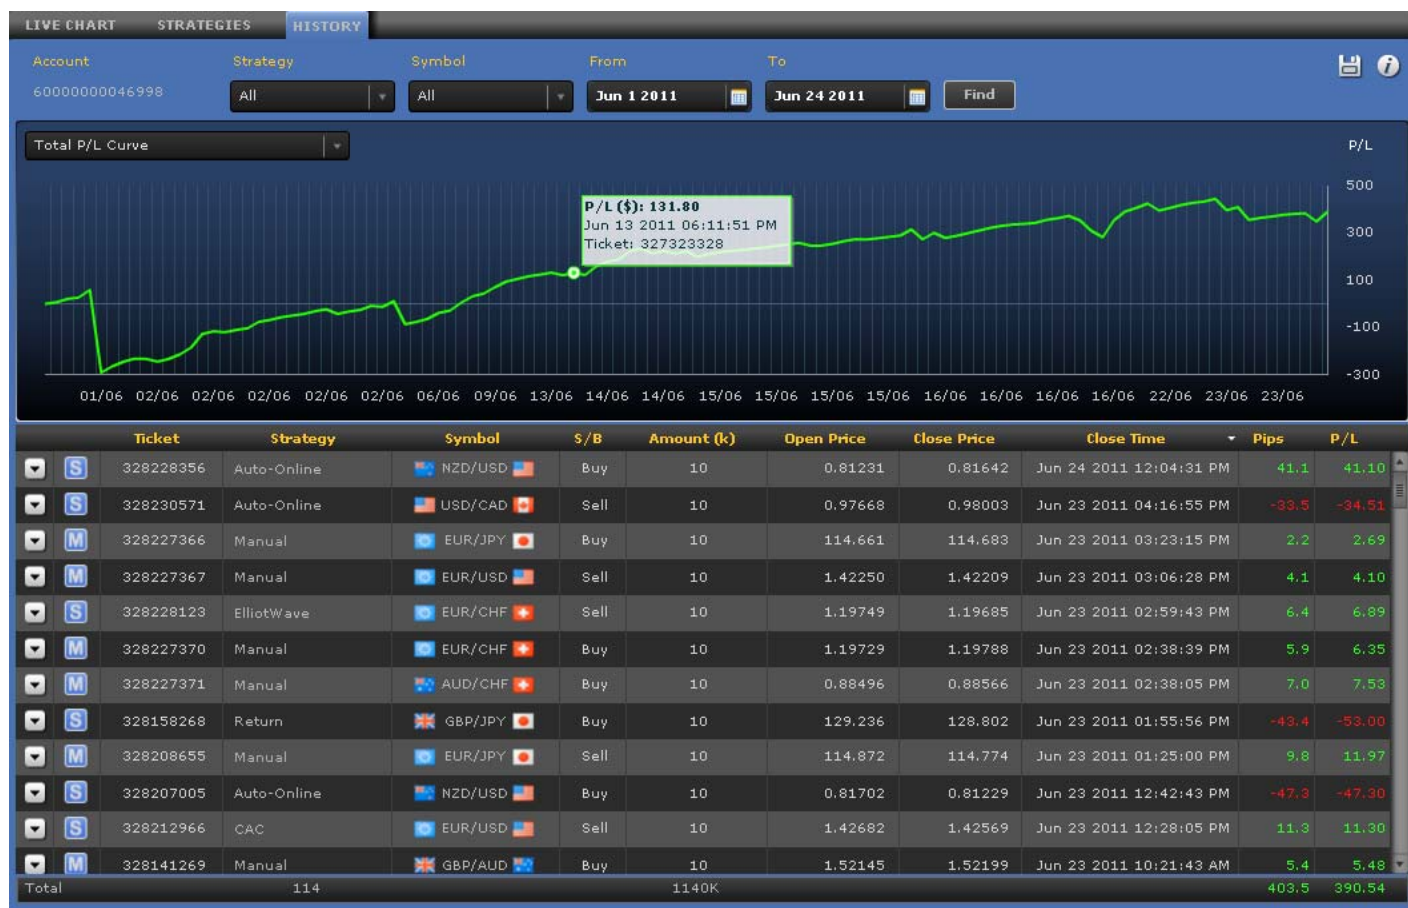

After you added the strategy, you can edit the trade size, pause level and “Stop” and “Limit” values, by clicking on the modify icon, or remove the strategy from the portfolio by clicking on the “X” icon.

When you create a portfolio, you should pay attention to the portfolio’s exposure, which Indicates your portfolio’s leverage, should all the strategies open all of their max positions simultaneously.

8. History

The history tab contains a list of all the positions that were closed either manually or by a strategy in your account. Use this information to analyze your account history.

You have the option to filter the data by strategy name, symbol or time frame.

9. Live Signals

The “Open Signals” section displays all the buys and sells signals of the strategies available on The Mirror Trader.

When you click on the “Mirror” button (1) the selected trade will be executed in your account. Above the “Mirror” button you can see whether it is a buy or sell signal, the name of the strategy and the currency pair the specific signal refers to (2).

In addition to the “Mirror” button, the Mirror Trader presents statistic information about its performance (3) and a graph of the strategy’s performance (4).

The time you can join a signal is limited to 30 seconds. The reason for this limitation is that due to the high volatility of the Forex market, we believe that the signal is only relevant for a short time. The time line bar above the graph (5) represents the time it is possible to mirror a signal and the number of users who mirrored the signal, either in automatic or semi automatic mode.

Signal's Status

In the last seconds you can mirror a signal, the “Mirror” button will blink, to indicate that this is your last opportunity to join the trade.

30 seconds after the signal is open, the “Mirror” button is replaced by “No entry” sign, indicating the signal is no longer available for mirroring.

After you Mirrored a signal, a “V” sign will appear in the “Mirror button”

If a signal is opened by a strategy that is already active in your portfolio, the signal box will display the automation icon (A) with a “V” sign to indicate the specific signal was executed automatically in your account.

In the times no new signals are opened by the strategies, the “Open Signals” section will be empty and you will see the time and date of the latest signal.
